Finally! A product hits the market that inline skaters have needed since inline skates were first introduced!

Huntington Beach, CA – June 28th, 2002 -- Huntington Beach, CA

Ah, Inline Skating: it's fun, it's fast, almost anyone can do it, from the occasional recreational skater to the hotshots. Whether skating for fitness, sports or the thrill of highflying aerials, inline skates have revolutionized the way we skate. It's pure performance on wheels!

But to get the best performance - and lifespan - out of those tiny wheels, regular maintenance, including rotating the wheels, is a must. And, until today, it was a pain! What used to be cumbersome and confusing, and anything but fun and fast, is now a snap (pun intended) thanks to the brilliance of Michael Hayes of FSO Industries in Huntington Beach, California. Michael, an avid inline skater has developed the revolutionary Rotation Station[™] which organizes and simplifies the wheel rotation process, making it user-friendly enough for even a rank beginner.

The Rotation Station[™] is unlike any other maintenance stand currently on the market in that it can easily and securely hold both skates. They're held at an angle which makes it very easy to remove and replace the axle bolts. Two rows of wheel slots down the center of the Rotation Station[™] allow for easy organization and a no-brainer method of determining the wheels' new locations before placing them back in the skates. And just in case that's not easy enough, the Rotation Station[™] comes with easy-to-follow instructions backed by an information-packed website:
www.rotationstation.com.

Anyone who has tried rotating their own wheels before will appreciate the significant amount of time the Rotation Station[™] saves. And speaking of saving, frequent rotation saves bucks on having to replace wheels less often and you can do it at home or on the run (er... skate) rather than having to take your skates to a professional (saving even more money). Hmmm: saves time, saves money, it's light-weight, easy to carry and affordable.

Get in line, skaters - this is the product you've been waiting for!
